🎓 Finance & Banking
📅 Graduation: 2027
✅ Available Full-time

PROFESSIONAL SUMMARY

IT Business Analyst with a Finance & Banking foundation and 2+ years of hands-on corporate experience in accounting operations and cross-department data reconciliation. Developed practical BA capabilities through self-driven projects and independent research, focusing on process analysis, requirement documentation, BPMN modeling, data-driven problem solving, BRD authoring, UML diagramming, and data analytics projects. Combines financial domain knowledge with technical analytical skills to translate business/marketing problems into structured, actionable **technology solutions** and clear development requirements.

TECHNICAL SKILLS

Business Analysis	BPMN 2.0, UML (Sequence Diagram, Use Case Diagram), ERD, Gap Analysis, As-Is / To-Be Modeling, BRD, Process Modeling, Stakeholder Requirements
Data & Reporting	SQL (CTE, Window Functions, Subquery, Self JOIN, Temp Tables), Power BI
Tools	draw.io, PostgreSQL, VS Code, Microsoft Office (Excel, Word, PowerPoint), Jira
Languages	Vietnamese (Native) • English (professional working proficiency)

PROJECT EXPERIENCE

Business Analysis Project — E-Commerce Order Process Improvement (2026)

- Conducted full As-Is process analysis of manual order handling (email intake, Excel-based inventory, phone communication) across 4 departments — identified 5 critical pain points including single point of failure and absence of audit trail
- Designed To-Be process using BPMN 2.0: automated order intake via web form, real-time inventory check, customer self-service tracking portal — eliminating dependency on key staff
- Produced UML/BPMN artifacts including As-Is/To-Be process flows, Sequence Diagram, Use Case Diagram, ERD, and exception handling workflows to support requirement clarification and system understanding
- Authored Business Requirements Document (BRD): 5 Business Requirements with KPIs, 10 Functional Requirements, 6 Non-Functional Requirements (performance, security, backup)
- Defined business rules, validation logic, and exception scenarios to support development alignment and future UAT preparation
- **Key outcomes:** projected order processing time reduced from 2 days to ≤ 4 hours; eliminated single point of failure; full audit trail for accounting compliance

Data Analytics Project — DA Job Market Salary & Skills Analysis (2025)

- Analyzed 700,000+ job posting records (Luke Barousse dataset) using advanced SQL techniques: CTEs, Window Functions (LAG, RANK, ROW_NUMBER), self-JOIN, and multi-level Temp Tables
- Built 5-page Power BI dashboard with DAX measures — comparing salary trends by skill, company, job title, and remote vs. on-site type across 12 months
- **Key findings:** SQL most in-demand skill (3,892 postings); remote AI/ML roles command salary premium; DA salary peaks in June (~\$102K avg) and dips in Q4 — actionable for seasonal hiring strategy
- Produced written analytical report with business recommendations on skill investment and recruitment timing

PROFESSIONAL EXPERIENCE

Accounting Intern | Minh Khoi Technology Company Limited — Ho Chi Minh City 2023 – 2025

- Processed 500+ invoices per month across multiple departments — maintained data accuracy through structured reconciliation workflow
- Reconciled cross-department invoice and inventory data — identified and resolved discrepancies before month-end closing
- Supported operational reporting and warehouse-related documentation — developed strong habit of questioning data anomalies and tracing root causes
- Gained direct exposure to business process gaps (manual handoffs, Excel-based tracking, phone communication between departments) — directly informed subsequent BA project work

EDUCATION

Ho Chi Minh City Open University

Bachelor of Finance & Banking

Expected Graduation: 2027 • Available for full-time employment immediately

Relevant coursework:

Financial Accounting • Corporate Finance • Financial Analysis • Business Statistics
